

To whom it may concern,

**Tan Weeboon (Aden Tan)**

In the Academic year 2020 Tan Weeboon (Aden) has attended the Year 11 Physics course at the college campus of Melba Copland Secondary School in Canberra. The course comprised two units. Each unit contains 70 hours of classroom tuition. The subjects studied in Unit 1 were introductory physics, optics, waves and kinematics. In unit 2 he studied thermodynamics, simple circuits, further waves and simple harmonic and circular motion. The course follows the IB Physics syllabus and the set text used was Adams and Allday, Advanced Physics (Oxford).

Aden has demonstrated that he can cope with the mathematical and conceptual requirements of this course. Despite being the only year 10 student in the class, he was consistently one of the stronger performers in examinations. His experimental capabilities were not as extensive as his theory and he needs to develop this skill further. He contributed in class and was able to work well with his peers. It was a pleasure having him in the class.

Yours sincerely,

R A J Bunten
